

Historical Texts

Over 400,000 texts from the 15th-19th century, now including the open access UK Medical Heritage Library collection.

The Historical Texts service brings together four significant collections for the first time:

- Early English Books Online (EEBO)
- Eighteenth Century Collections Online (ECCO)
- British Library 19th Century collection
- UK Medical Heritage Library (UKMHL) collection.

The recent addition of 66,000 texts from the UKMHL, represents the culmination of a three-year project between Jisc, the Internet Archive, the Wellcome Library and nine partner institutions.

Historical Texts covers a wide range of subject areas including english literature, history, geography, science, social science, religion and medicine. The service has many powerful features including: the ability to search across all four collections, to modify searches and download texts in a variety of formats, and a viewer to see images and text side by side.

UK Medical Heritage Library

This invaluable open access resource for the exploration of medical humanities takes advantage of all the best features of the Historical Texts platform, including full colour page images, PDF downloads and searchable OCR full text for all publications.

A new set of visualisation tools provides unique ways to explore deeper the collection including: a hospital map, wall of images, body parts dendrogram, and timeline.

Accessing the service

Any institution that subscribes to Historical Texts will also have access to the Journal Archives service, which brings together more than 600 journals from 8 major publishers. Combined, these platforms offer their users a world-class collection, a virtual library of thousands of journals and historical texts. Both services are available via subscription to UK Higher Education and Further Education institutions and Research Councils who are Jisc Collections members.

For more information about the service and how to subscribe, visit: historicaltexts.jisc.ac.uk/about
